

POLLUTION, WASTE AND REMEDIATION

OUR SERVICES

COFFEY ENVIRONMENTS

Achieving extraordinary outcomes throughout the project lifecycle requires specialist knowledge to transform environmental, social and safety expenditure into investment.

At Coffey Environments, we partner with our clients globally to deliver life of project specialist environmental, social and safety performance solutions in the infrastructure, resources, government and property sectors.

We become involved in projects at the early stage of feasibility, providing strategic advice, management of the approvals and permitting process, stakeholder engagement and technical investigations. Our involvement continues as we provide environmental management, OHS, waste management and energy monitoring services during construction and operations.

Throughout the lifecycle, we leverage our expertise in geographic information systems and our project management skills to support a project. At the end, we undertake contaminated site assessment and remediation, effectively allowing the lifecycle to begin again as the site is remediated for a new land use.

We nurture excellence and encourage our people to stay abreast of the latest developments in their chosen specialties by creating the space for great team work and innovation.

Our specialists bring over 35 years of project experience in more than 40 countries throughout the Americas, Africa, Asia Pacific, Europe and the Middle East.

POLLUTION, WASTE AND REMEDIATION

Coffey Environments identifies the problem – then provides the optimum solution.

Our range of specialist knowledge and expertise in the delivery of pollution, waste and remediation services is instrumental in assisting clients to find innovative solutions to their environmental problems.

SPECIALISTS IN ENVIRONMENTAL SOLUTIONS

We provide high-level strategic advice, legislative auditing, contaminated site investigations, strategic remediation management, environmental management, environmental monitoring & impact assessments, waste management, pollution control, right through to ecological studies and computer based modelling.

Coffey Environments uses risk identification techniques and advanced management approaches to limit legal exposure and community opposition, enabling us to assist and guide clients to identify and solve environmental problems to help mitigate current and future environmental impacts.

Coffey Environments benefits from a strong network of offices nationally and internationally, operating throughout Australia, New Zealand and the United States.

OUR SERVICES

OUR SERVICES

We provide a comprehensive range of pollution, waste and remediation services, including:

Contaminated Sites

Environmental Monitoring

- Surface water, groundwater and wastewater quality
- Particulates and gaseous air omissions
- Terrestrial and marine flora and vegetation
- Terrestrial and marine fauna
- Air quality and human health risk assessments of contaminants
- Soil and sediments quality.

Environmental Auditing

- Contaminated sites
- Industrial facilities
- Environmental Management Systems
- Due diligence.

Site Assessment

- Environmental site assessments
- Acid sulphate soils
- Environmental site history
- Sampling and analysis of air, soil and water.

Remediation

- Remediation, feasibility studies and action plans
- Design, construction & operation of remediation systems
- In-situ, ex-situ soil and groundwater treatment
- Contract management.

Pollution Control & Waste Management

- Solid and liquids
- Planning (Strategic, Regional and Local)
- Hazardous and problematic wastes
- Assessments, design and management of landfill sites
- Identification of potential landfill sites
- Pollution liability research.
